# QUIKCIRC<sup>®</sup> CIRCULATING SYSTEM

Get more out of your pool with an intelligent QuikCirc circulation system from Pentair.

The key to maintaining clear and healthier pool water is an effective circulation system. Pentair QuikCirc system works to help improve the quality of your water, by evenly dispersing chemicals and treated water throughout your entire pool via targeted circulation.

Strategically placed rotating circulation jets push fresh, sanitized water all around your pool. And by circulating water from the bottom up, QuikCirc efficiently moves heated water to every corner of your pool, combatting unpleasant cold spots.

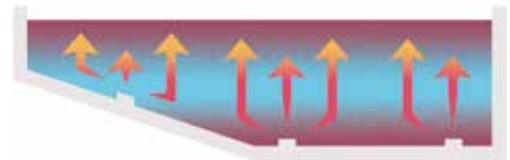

## Your pool isn't truly clean unless it's well-circulated.

By keeping your pool water moving, more debris makes its way into the elegant AVSC Main Drain and the powerful QuikSkim Ultra Venturi Skimmer – more effectively cleaning both your pool floor and surface.

All in all, the QuikCirc circulation system helps promote clean pool water more efficiently, and with less energy and chemical usage, so you can spend less time scrubbing and more time swimming.

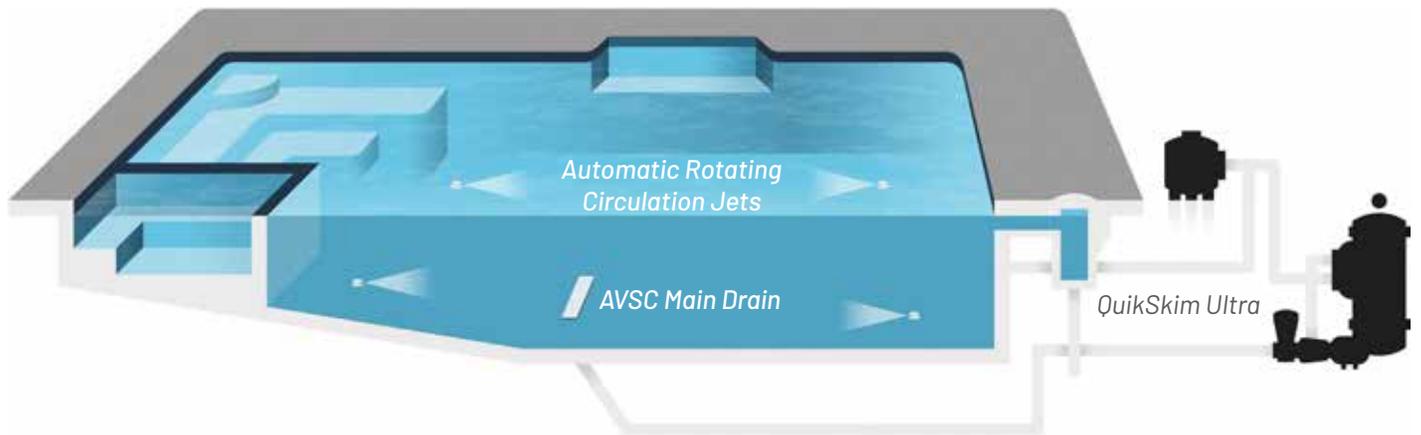

*Conventional systems only move water at the pool surface, creating cold spots and poor sanitization.*

*Pentair circulation systems efficiently distribute clean, heated water evenly for a fully enjoyable experience.*

*Strategically placed circulation jets keep your pool water moving, promoting healthy swimming and combating pesky cold spots.*

## Cleaner and healthier water by circulation.

### **Powerful G4 Venturi Power circulation jets spread fresh water and evenly disperse chemicals.**

Six to nine automatic rotating circulation jets placed in key areas on your pool's floor to help keep your water flowing, creating a healthier, more refreshing pool experience.

### **QuikSkim Ultra Venturi Skimmer to collect more surface debris.**

A powerful and energy-efficient pool skimmer, the QuikSkim Ultra expertly skims the surface of your pool using venturi power instead of standard suction. When used with a variable speed pump, this allows 100% of the skimmer suction to be directed at the main drain, aiding in debris removal.

### **AVSC Drain gathers debris from your pool floor.**

A critical part of the QuikCirc system, the AVSC aids in secondary level of protection and an efficient heavy debris drain. The AVSC unblockable drain is certified by NSF International.

*Working together, these great products create an affordable, thorough, and efficient circulation system for your pool. With the QuikCirc system, pool ownership is both easy and rewarding.*
